

With over 17 years of experience in the technology field, I have developed a strong set of competencies in manufacturing process improvement, customer relationship management, and project implementation. I enjoy resolving challenges and implementing change within fast-paced environments, working with diverse teams and stakeholders across various industries and scales.

Most recently, I was an executive assistant to the CISO at Pearson, where I built and implemented processes to monitor business planning and delivery, operational controls, HR metrics, and performance and operations metrics. I also drove collaboration across the CISO organization and managed communications, including preparing and facilitating monthly town hall meetings. I integrated agile framework and collaborated with application owners, infrastructure leaders, security specialists, and service providers to deliver security services to clients. I am looking for a new role where I can leverage my skills and experience to support the strategic vision and goals of a technology company.
